

## PERFORATED CLOSURE

### Fibre Cement Trim

Cladco Perforated Closure is essential for your Fibre Cement Wall Cladding project. Perforated Closures have been manufactured with small holes at even spaces to encourage airflow and ventilation while also preventing animal and debris from entering. Cladco Perforated Closures are designed to be installed at the base of the project, supplying your building with an adequate airflow. The Perforated Closure is an crucial aspect of any Fibre Cement Wall Cladding project. Simply attach the Closures to the base of the Battens before installing the first Wall Cladding Board. Perforated Closures should also be fixed above any windows and doors where Fibre Cement Wall Cladding will be fitted.

Trims do not require any staining or painting, and are manufactured onsite using high-quality aluminium for a stain, rust and corrosion resistant product.

### CLADCO TRIMS

**PERFORATED CLOSURE**  
Installed under the Battens at the base of the build, or at the top of any doors and windows, to ensure ventilation throughout the installation. Perforated Closure also protects the build from any dirt or insects penetrating the air flow space.

**INTERNAL CORNER TRIM**  
Used in the inside of a door frame or porch for a neat seamless finish.

**SYMMETRIC EXTERNAL CORNER TRIM**  
Designed to fit on the corners of the building, the Fibre Cement Wall Cladding Boards are then installed to flat edges of the Trims.

**CONNECTION PROFILE**  
Installed around window reveals and door frames to support Boards.

**START TRIM**  
Installed at the start of new Board runs at the base of the building, or above windows and doors for support.

**ASYMMETRIC EXTERNAL CORNER TRIM**  
Designed to be installed on either side of the door or window, allowing Boards to be fitted on the flat surface of the Trim.

SPECIFICATIONS	
Length	3 metres
Size	40mm (w) x 30mm (h)
Thickness	1mm
Weight (approx)	0.5kg
