

WALL CLADDING Starter Strip 3m

Before installing your Composite Wall Cladding or ProClad Wall Cladding Boards, you need to make sure they will look perfect; that's where Wall Cladding Starter Strips come into play and will ensure everything is level before you start your project on the building's exterior.

Compatible with both our Composite and ProClad Cladding, these tough exterior Starter Strips are designed using precision-made galvanised steel to increase resistance to corrosion and wear over time.

Measuring 3-metres long, 50mm high and 10mm deep, steel Starter Strips are the only way to start your projects as you mean to go on - perfectly. All you have to do is attach the Wall Cladding Starter Strips to the bottom of each Batten that you have attached to your exterior wall, then slot the first Wall Cladding Board into place.

SPECIFICATIONS

Each Starter Strip measures	3000mm x 50mm x 10mm
Each Starter Strip weighs approximately	1.32kg

Please note you will need to leave a minimum of 15mm between the floor and Starter Strip for the Wall Cladding not to touch the floor. You will also need to ensure the Starter Strip is perfectly level before installing the Boards.

PLEASE NOTE - Images are used for illustration purposes only, actual item may vary slightly from the image supplied.
