

## PERFORATED CLOSURE Fibre Cement Trim

Cladco Perforated Closure is essential for your Fibre Cement Wall Cladding project. Perforated Closures have been manufactured with small holes at even spaces to encourage airflow and ventilation while also preventing animal and debris from entering. Cladco Perforated Closures are designed to be installed at the base of the project, supplying your building with an adequate airflow. The Perforated Closure is an crucial aspect of any Fibre Cement Wall Cladding project. Simply attach the Closures to the base of the Battens before installing the first Wall Cladding Board. Perforated Closures should also be fixed above any windows and doors where Fibre Cement Wall Cladding will be fitted.

Trims do not require any staining or painting, and are manufactured onsite using high-quality aluminium for a stain, rust and corrosion resistant product.

### CLADCO TRIMS

**SYMMETRIC EXTERNAL CORNER TRIM**  
Designed to fit on the corners of the building. Fibre Cement Wall Cladding Boards are installed to the flat edges of the Trim.

**INTERNAL CORNER TRIM**  
Used in the internal corners of a building for a neat, seamless finish.

**WALL END TRIM**  
Installed on the finishing edge to conceal exposed ends of Fibre Cement Wall Cladding Boards.

**SINGLE & DOUBLE CONNECTION TRIMS**  
Installed to the inside edges of window reveals and door frames to support Boards.

**PERFORATED CLOSURE**  
Installed under the Battens at the base of the build, or at the top of any doors and windows, to ensure ventilation throughout the installation. Perforated Closure also protects the build from any dirt or insects penetrating the air flow space.

**START TRIM**  
Installed at the start of new Board runs at the base of the building.

**ASYMMETRIC EXTERNAL CORNER TRIM**  
Designed to be installed on either side of the door or window, allowing Boards to be fitted on the flat surface of the Trim.

SPECIFICATIONS	
Length	3 metres
Size	40mm (w) x 30mm (h)
Thickness	1mm
Weight (approx)	0.5kg
