

DECKING/CLADDING FRAME

Composite Joist/Batten 4m

Composite Joists/Battens can be utilised for most domestic Decking and Wall Cladding projects. It is recommended using Cladco Composite Joists in conjunction with a hard concrete base for Decking projects. This is to ensure that the Joist support substructure is sturdy and, above all, reliable to use for the rest of your project. Purchasing one Joist per square metre of Decking and spacing them no more than 400mm apart is highly recommended.

About Our 4m Composite Joists/Battens

As the first section to be considered before putting together your Decking or Cladding support, Composite Joists/Battens are a vital component. Composite Battens can be used in conjunction with Cladco Composite Wall Cladding Boards on a solid exterior wall.

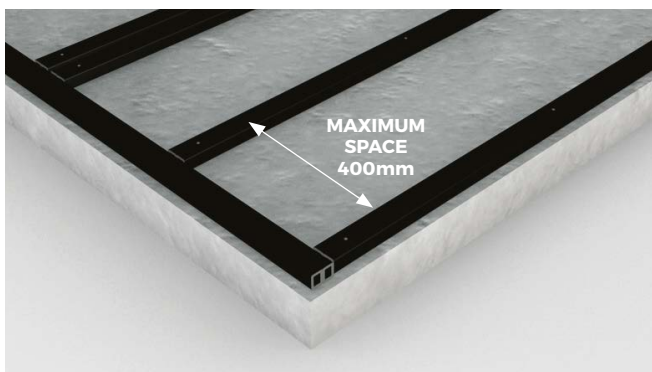

Alternatively, these can be used as Joists on a solid concrete base for Cladco Composite Decking to be installed on top.

SPECIFICATIONS	
Each Joist measures	4000mm x 50mm x 30mm
Each Joist weighs approximately	5.16kg
Each Joist should be spaced no more than a maximum of 400mm apart.	
We recommend as a rule of thumb purchasing 1x Joist per square metre of Decking.	

Composite Joists/Battens can be utilised for most domestic Decking and Wall Cladding projects and we highly recommend they are used in conjunction with a hard concrete base. This is to ensure that the support substructure is sturdy and, above all, reliable to use for the rest of your project.

PLEASE NOTE: These 30x50mm Composite Joists are not structural and will need to be supported along their entire length on any decking or cladding installation.
