MATERIALS

The aluminium decking balustrade is crafted from extruded and welded aluminium sections, ensuring exceptional strength and durability.

Designed for low-maintenance performance, it features a non-corrosive surface that withstands exposure to the elements.

Finished in a sleek black coating, this modern and stylish balustrade complements a variety of outdoor spaces, providing both functionality and aesthetic appeal.

INSTALLATION

Handrail gates are manufactured and sold as complete sections, requiring no self-assembly for a quick and hassle-free installation. Designed to fit easily between balustrade posts, they provide a secure and functional addition to any outdoor space. Magnetic latch and hinge systems are recommended to complete installation (not included).

ACCESSORIES

Handrail gate balustrades can be seamlessly combined with balustrade posts, handrails, and stair sections to create a complete and secure installation. By adding consecutive handrail sections, you can achieve the precise length required for your project.

This versatile system allows you to customise your balustrade system to suit any decking or outdoor space, providing both functionality and style for a durable, long-lasting solution.

DESIGN

This black powder-coated aluminium gate is built for strength and visual appeal, measuring 1000mm tall by 800mm wide. Vertical railings are spaced 95mm apart, creating a clean, modern look while maintaining safety. Designed to integrate seamlessly with Cladco's balustrade system and compatible solid-core decking boards for a cohesive finish.

LONG LASTING

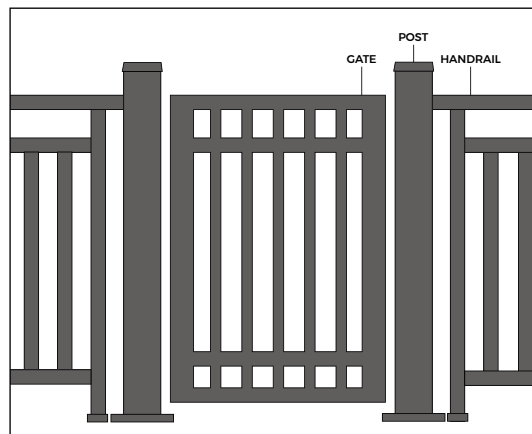

Handrail gate sections are strong, durable, and visually appealing, offering a high-quality alternative to other balustrade options. Designed for superior strength and longevity, they provide peace of mind for any decking project.

Built to withstand the elements, these handrails offer a low-maintenance, long-lasting solution for both residential and commercial spaces. Combining style and functionality, they create a secure and attractive railing system for any outdoor area.

INSTALLATION ADVICE

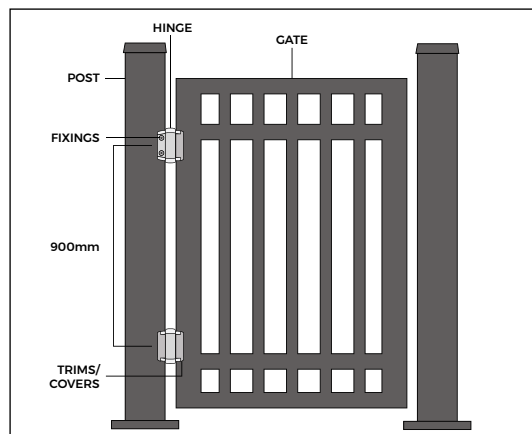

Installing The Gate

Balustrade gates are manufactured and sold as complete sections, no self-assembly is required and they are easy to fit between posts. To add a gate within a balustrade system simply connect consecutive handrail sections to achieve your desired length of balustrade, then add a gate in between. When installing the gate, it is important to make sure the height of the gate and the height of the handrail are level with each other.

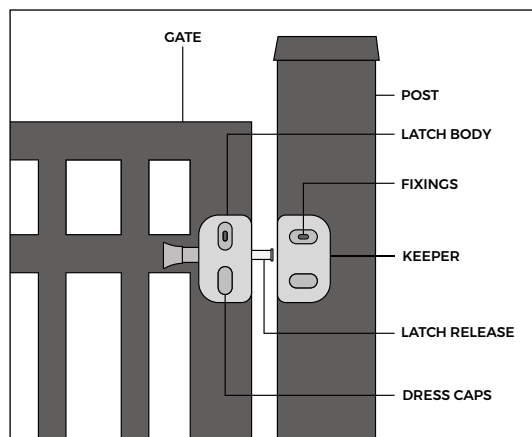

Installing The Hinges

Begin by securing the hinge to the gate itself. Once attached, fix the hinge to the corresponding post ensuring the gate is level with the handrail. After both sides are securely in place, clip on the provided trim covers to conceal the screws and achieve a clean, finished look. Finally, adjust the gate's closing tension using the built-in screw mechanism located at the top of the hinge. Hinges should be a minimum of 900mm apart.

Installing The Latch

To install the gate latch, begin by fixing the keeper to the post. Next, attach the latch body to the gate, ensuring both components are aligned and level. Once secured, fit the dress caps over the fixings for a clean, seamless appearance. The latch release then connects magnetically to the keeper and can be pulled to open the gate.

Please Note: Hinges and latches are sold separately.
