## RECYCLED MATERIALS

Cladco Composite Skirting Trims are manufactured using 100% recycled materials, reducing our impact on the environment. A mix of 60% recycled hardwood fibres and 40% recycled, post-consumer plastics provides each Trim with low-maintenance and long-lasting benefits..

All Cladco Composite products are available as FSC® certified for the same cost. If you require FSC® certified products, please ask for these when placing your order.

## AFTERCARE

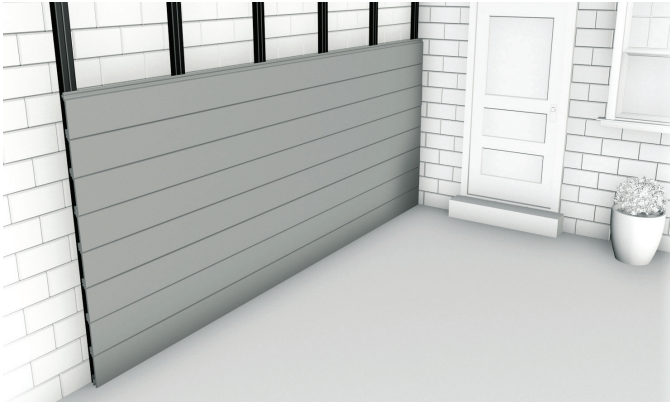

For standard everyday debris such as plants, leaves, berries and animal droppings, simply clear these away with a brush.

Avoid using grit or sand, as well as metal or plastic spades, on your Skirting Trims as they may scratch the surface.

## INSTALLATION ADVICE

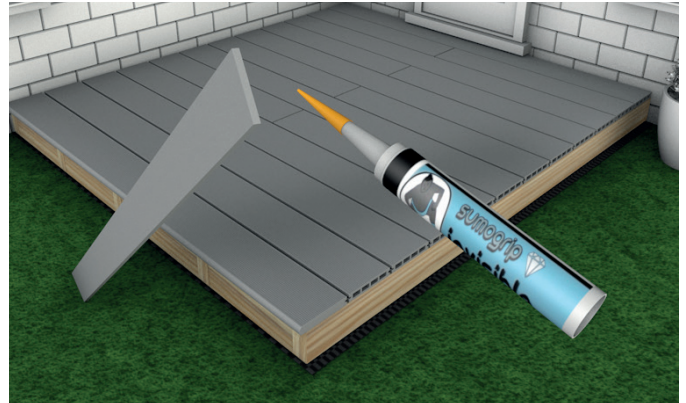

### Cladding Installation

Skirting Trims can be cut to size or joined together depending on requirements. CTI Adhesive can then be applied to the Trims to secure them to your Cladding. Skirting Trims can be cut to size with standard woodworking tools.

### Decking Installation

Two Trims can butt together if required. CTI Adhesive will then need to be used along the length of joist substructure to attach the Composite Skirting Trim. As a part natural wood product, avoid installing in areas of standing water.

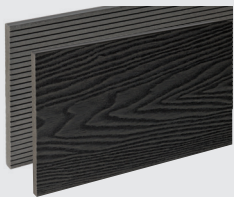

## NATURAL WEATHERING

As Cladco Composite Skirting Trims contain natural wood elements, they will fade from weathering over time. This process is most noticeable within the first six months after installation.

Please be aware that the appearance of Composite Trims will change depending on weather conditions and, when wet, Trims will display a different tone compared to when they are dry.

For detailed information about installation, please read our Composite Decking or Composite Cladding Installation Guide.
