

1.84M FENCING RAIL PROFENCE FENCING

The ProFence top and bottom rail work together to seal your ProFence panels to the posts, ensuring a completed fencing system. The top rail (left) and the bottom rail (right) are both 1.84m in length to match the length of the ProFence boards.

SPECIFICALLY ENGINEERED FOR OUR CLADCO PROFENCE SYSTEM

REINFORCES OVERALL DURABILITY OF INSTALLATION

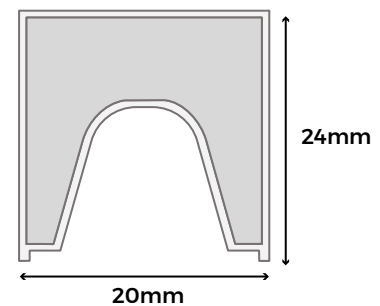

CREATES A SLEEK, HIGH QUALITY FINISH

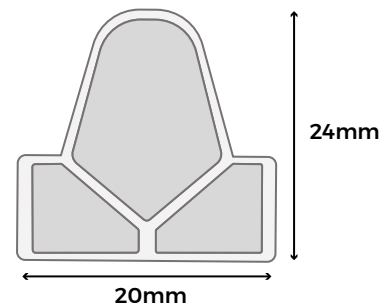

RAIL SPECIFICATIONS

SKU	WPCFREPAIR
Length	1.84m
Width	20mm
Depth	24mm
Material	Aluminium

TOP RAIL

BOTTOM RAIL

Specifically Designed
For ProFence
Fencing Panels

Made From
Strong and Durable
Aluminium

Provides Protection From
Long Term Weathering

MATERIALS

Crafted from high-quality aluminium, these top and bottom rails offer a strong and reliable solution for your fencing system.

DURABILITY

While the top rail finishes and secures the final panel, the bottom rail provides a stable base for the first ProFence panel—together creating a durable and secure fence structure.

ACCESSORIES

Complete your Cladco ProFence project with our ProFence panels, post foot and post caps.

LOW MAINTENANCE

These fencing rails help protect your fence from moisture, dirt, and weather exposure, reducing future maintenance and extending the life of your fence.

EASY TO INSTALL

ProFence top and bottom rails are easy to install, slotting neatly into place with the panels to create a clean, professional finish.

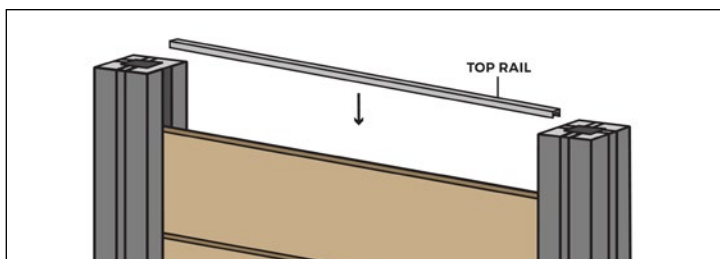

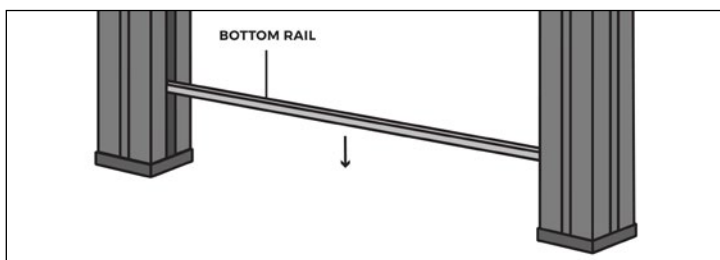

INSTALLATION ADVICE

Bottom Rail:

The bottom rail is placed first, between the aluminium posts with the first fencing panel fitting on top.

Top Rail:

Once all of the fencing panels have been installed and the desired fence height is reached, the top rail can be fitted to envelop the exposed top edge of the final panel. A U-channel (provided) should then be secured to the top rail and aluminium post to make sure that the fence is anchored.
